

### The Goal

Increasing regulations, compliance requirements, and threats on information have generated greater concerns for organizations of all sizes to protect their applications and databases. In order to provide this data security, organizations must build systems which deliver information with confidentiality, integrity and reliability.

### The Benefits

BIAS has been helping its customers to address these challenges using Oracle's Identity & Access Management Suite, along with its Database security components. These components provide standards-based solutions to common security problems at every layer of your infrastructure.

### AUTHORIZATION CAPABILITIES

Providing frameworks to build modern access control mechanisms to support multiple channels (both mobile and web), by offering multiple types of authentication and authorization capabilities. These components are also enhanced with fraud detection and fine-grained authorization.

### IDENTITY MANAGEMENT

Providing frameworks to manage your identities and related operations such as provisioning and de-provisioning, while also maintaining compliance. Addressing concerns such as proper separation of duties is a key part of this component, as well.

### PROTECTION AND FIREWALLS

Data Security frameworks are key in building a holistic security model. Insider threats are major concern of organizations, and our data security solutions offer capabilities to protect consumer data from privilege user. By addressing encryption requirements in transit and at rest, and building firewalls around data, these components are able to protect against attacks such as SQL Injections.

## DATA SECURITY SERVICES:

*Which security services fit your organization's needs*

Security Practices at BIAS offer services to cover both front-end Identity and Access Management, as well as back-end Database security. As a recognized and specialized Oracle Partner for Security, BIAS has gained experience in implementing Oracle security solutions in both Commercial and Public Sector customers.

## ABOUT BIAS

BIAS Corporation is one of Oracle's elite Platinum partners specializing in design, implementation, and maintenance of comprehensive IT solutions for some of the world's leading organizations. Oracle Applications, Technology, and Sun hardware systems are our primary focus and the foundation of our business. We pride ourselves on being industry leaders in Oracle E-Business Suite Applications, Database, Fusion Middleware, and Business Intelligence products.
