### Oracle E-Business Suite – Release 12 – The Global Business Release

The Oracle E-Business Suite (EBS) product continues to evolve, offering greater value and providing new advantages for your business. Upgrading Oracle EBS is key to realizing the maximum return on your Oracle investment. The Oracle EBS product has expanded significantly in functionality, scalability, usability, and reduced cost of ownership over the past few releases, including dramatic leaps with the recent Oracle E-Business Suite Release 12.

### There are many reasons to consider upgrading your current Oracle EBS version.

- Upgrading may provide access to new functionality and software applications that can help keep your organization well positioned to meet your business objectives through leveraging the latest technology
- In an increasingly rigorous regulatory compliance environment, upgrading may facilitate compliance at a lower cost through retiring customizations and deploying standard processes across your organization
- Upgrading allows you to leverage the latest performance and usability enhancements, enabling you to increase the efficiency of your applications utilization and your business
- You may need to upgrade to remain eligible for the highest levels of product support
- You may need to upgrade to remain eligible for tax and regulatory updates for your applications

In evaluating any upgrade, there are many factors to consider, such as support time frames, functional capabilities, technical infrastructure, and underlying business needs. These factors are often complex and interrelated—all of which adds to the importance of determining the most appropriate upgrade strategy.

### Why BIAS?

BIAS consultants have a long history of successful Oracle EBS upgrades. The foundation of our success is based on our strategic approach to Oracle upgrade projects. We do not merely see these efforts as technical upgrades; but we apply the skills and product expertise of our Oracle EBS Application Specialists to ensure that our customers understand the new features from a functional perspective as well. This allows you to understand, plan for, and test functionality changes before they impact your business and to take advantage of new features for a true business benefit.

Our experts, with experience and certifications in both the functional and technical areas required for an upgrade (Release 12, 11g, Oracle Enterprise Linux, etc.), provide the framework and guidance necessary to perform any of the following tasks for an upgrade project: Platform Migration Database Upgrade Oracle Applications Upgrade

We want to be your Oracle partner by helping you implement the best solutions for your organization. Our Oracle experts are ready to help you experience the performance improvement and cost savings that come when world-class companies implement best practice based solutions using the Oracle E-Business Suite.
